

Supplementary Material for

Klusek, M., and M. Grabner, 2016. X-ray densitometry of Norway spruce subfossil wood from Austrian Alps. *Tree-Ring Research* 72(1):23-34.

Table 1. The mean, minimum and maximum ring density, earlywood density, and latewood density calculated for a particular sample before any extraction as well as after hot water, acetone and acetic acid preparation. The numbers in parentheses refer to standard deviation values.

Sample	Dating	Without extraction	Hot water	Acetone	Acetic acid
Maximum density					
15A	1311-1399	776.70 (153.59)	820.62 (183.93)	750.54 (140.65)	710.39 (143.52)
43A	1037-1361	834.51 (171.77)	742.16 (125.09)	820.58 (160.05)	775.77 (147.79)
45A	902-1144	794.38 (142.25)	760.44 (127.77)	768.76 (165.65)	701.14 (109.46)
57B	631-834	815.59 (166.42)	669.85 (200.16)	677.06 (187.09)	693.78 (150.93)
110A	920-1006	859.55 (141.70)	843.63 (144.80)	910.70 (146.52)	772.83 (153.47)
